

WHAT IS CLAIMED IS:

1. A phone holder, comprising:

an outer member that is adapted to be releasably secured to a support; and,

an inner member that is slidably received within the outer member, said inner member being releasably secured to said outer member;

wherein, when said inner member is removed from said outer member, said outer member is adapted to receive a phone having a first size and, when said inner member is received within said outer member, said inner member is adapted to receive a phone having a second size.

2. The phone holder according to claim 1, wherein each of said inner and outer members include a front wall that has an elongated opening through which a front of said phone is visible.

3. The phone holder according to claim 2, wherein each of said inner and outer members include a bottom wall that has an opening through which a power cord of said phone extends.

4. The phone holder according to claim 3, wherein said inner member includes outwardly extending ears that are snap fit through openings in the outer member.

5. The phone holder according to claim 4, wherein said inner member bottom wall includes alignment ribs that extend into slots formed in the bottom wall of the outer member.

6. The phone holder according to claim 5, wherein the outer member includes an upper peripheral rim and the inner member includes an upper peripheral rim, said inner member peripheral rim being disposed inwardly adjacent said outer member peripheral rim when said inner member is received within said outer member.

7. A phone holding assembly, comprising:

a panel assembly;

an outer member that is adapted to be releasably secured to said panel assembly; and,

an inner member that is adapted to be slidably received within the outer member, said inner member being releasably secured to said outer member;

wherein, when said inner member is removed from said outer member, said outer member is adapted to receive a phone having a first size and, when said inner member is received within said outer member, said inner member is adapted to receive a phone having a second size.

8. The phone holding assembly according to claim 7, wherein said outer member includes a series of mounting tabs that are releasably secured within openings in the panel assembly.

9. The phone holding assembly according to claim 8, wherein each of said inner and outer members include a front wall that has an elongated opening through which a front of said phone is visible.

10. The phone holding assembly according to claim 9, wherein each of said inner and outer members include a bottom wall that has an opening through which a power cord of said phone extends.

11. The phone holding assembly according to claim 10, wherein said inner member includes outwardly extending ears that are snap fit through openings in the outer member.

12. The phone holding assembly according to claim 11, wherein said inner member bottom wall includes alignment ribs that extend into slots formed in the bottom wall of the outer member.

13. The phone holding assembly according to claim 12, wherein the outer member includes an upper peripheral rim and the inner member includes an upper peripheral rim, said inner member peripheral rim being disposed inwardly adjacent said outer member peripheral rim when said inner member is received within said outer member.

14. The phone holding assembly according to claim 7, wherein said panel assembly is movable between a closed position and an open position, said outer member being disposed generally vertically when said panel assembly is in said closed position.
